## 2019 Michigan Measles Outbreak Information

As of April 2, 2019, the Michigan Department of Health and Human Services has confirmed 34 total measles cases statewide since March 13, 19

Unvaccinated residents, or residents who are unsure of their vaccination status, should get vaccinated. Residents should contact their healthcare provider or local health department to receive vaccine. If symptoms develop, do not visit your doctor or emergency room unless you call ahead so they can take precautions to prevent exposure to other individuals.

The measles vaccine is highly effective and very safe. A single dose of measles vaccine protects about 95 percent of children, but after two doses, almost 100 percent are immune. You cannot get measles from the vaccine. It is effective within 72 hours of exposure to prevent illness.

### Healthcare Provider Information

Persons who work in health care settings are at increased risk of exposure to measles and at increased risk of transmission to persons at high risk of severe measles. All persons who work in such settings and have the potential for exposure to potentially infectious patients or materials should have presumptive evidence of immunity to measles to prevent any potential outbreak

**\*See your health care provider regularly\***

**UOP: Focuses on the delivery of high quality healthcare and honors commitments to our providers, patients, and our participating health plans.**
